RAISING A CAR WINDOW.—It requires six men, according to the San Francisco News Letter, to put up a car window. A young lady gets in, and having humped around in her seat for about five minutes, she turns and request- the gentleman just behind her to perform that service. This is a near signed individual, who peers around the window frame some time for the catch, and then -of course the window sticks-jerks his finger nail half off, and sits down with a red face smid the giggling of the school girls opposite. Next, the man in the front seat puts his lavender colored knee on a paper of cherries beside him, clutches and yanks at the knob, and then smiles sweetly at a pale young man with long hair. This martyrturns white, rises, and buttons up his coat for the death struggle. On the eleventh pull he takes a crowbar. Just when he is about to use this the conductor happens . Rage is for little wrongs; despair is by, and slides the window airily up with a gentle twist of the wrist.

It was all produded with perfect case on one of the many WILSON MACHINES which surrounded it. This instrument does a great range of work, as it indicated by the samples shown. It runs with great precision, from the most deligible for the heaviest 1 athet. It has a new combination of crank and cam, and has a transverse independent shuttle race, which insures an open, square, lock-stitch, without undue friction on the thread. It also has the advantage of a long shuttle, driver or pitman—a good point, as it avoids sharp angles. It has a short, straight needle, and a steel shuttle. The samples shown were splendid specimens of work manship. Its great popularity fully attests the skill and energy of the man whose name it bears."
